requests: clonerequest@sanger.ac.uk

on Apr 12, 2001 this sequence version replaced gi:13276997.

During sequence assembly date is compared from overlapping clones.

Where differences are found these are annotated as variations

together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission

corresponding to the overlapping clone, as we submit sequences with

only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest. The following
abbreviations are used to associate primary accession numbers given
in the feature table with their source databases: Em:, EMBL; SW:,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3059

* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
the record is updated, the accession number will
* be preserved.

Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         * NOTE: This record contains 152 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1. 851: contig of 851 bp in length 951: gap of 100 bp 1904: contig of 853 bp in length 1904: gap of 100 bp 2719: contig of 815 bp in length 3668: contig of 845 bp in length 455; contig of 849 bp in length 455; contig of 849 bp in length 4570: gap of 100 bp 5600: contig of 843 bp in length 5632: contig of 843 bp in length 6532: contig of 843 bp in length 6532: contig of 849 bp in length 6532: contig of 849 bp in length 7881: gap of 100 bp 847: contig of 849 bp in length 7881: gap of 100 bp 9383: contig of 849 bp in length 9383: contig of 849 bp in length 10342: contig of 849 bp in length 10442: gap of 100 bp 9383: contig of 849 bp in length 11423: gap of 100 bp 94 in length 11423: gap of 100 bp 95 in length 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423: gap of 100 bp 11423:

Direct Submission

Submitted (09-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 9, 2003 this sequence version replaced gi:24941437.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends off the clone and there may be sequence may extend beyond the ends off the clone and there may be sequence shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.

NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Consensus quality: 256293 bases at least Q40

Blvd., Crove Coeur, MO 63167, USA
Derived from rice genomic sequences generated from the Monsanto
Rice Genome Sequencing project. Please see
http://www.rice-research.org for more information. The sequence
data were produced primarily in the laboratories of Dr. Leroy Hood
at the University of Washington in Seattle.

* sequencing reads that have not been assembled into

* contigs. Runs of N are used to separate the reads

* and the order in which they appear is completely

* arbitrary. Low-pass sequence sampling is useful for
identifying clones that may be gene-rich and allows

overlap relationships among clones to be deduced.

* However, it should not be assumed that this clone

will be sequenced to completion. In the event that

* the record is updated, the accession number will

be preserved.

DEFINITION ACCESSION VERSION

RESULT 14 AC140499

```
and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will be preserved.
                                                                                                                   gap of 100 bp in length contig of 934 bp in length gan of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap of 100 bp in length gap

The nucleotide sequence of this BAC clone was generated by combining Monsanto and RGP-dapan sequencing data.

NOTE: It currently consists of 1 contigs. Gaps between the combining Monsanto and RGP-dapan sequence of the gaps between the are represented as runs of N. The order of the gaps between the are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a "working draft' sequence.

* NoTE: This is a soon as it is available and

* the accession number will be preserved.

                                                                   ò
                                                                                 This invertion relates to a may isolated deprotein coupled receiptor to polypeptide, GPCRX mucleic acid and an antibody specific to the protein care useful for treating, preventing or alleviating a GPCRX associated disorder to pathological state in a subject, particularly a human. In particular, the disorder is cardiomyopathy, atherosclerosis, diabetes, or a disorder related to cell signal processing and metabolic pathway or modulation. The GPCRX polypeptide and nucleic acid are also useful for diagnosing the presence of or predisposition to a disease associated with alterapeutic or prophylactic applications for disorders associated with alterapeutic or prophylactic applications for disorders associated with abermant GPCRX expression or activity, e.g. von Hippel-Lindau syndrome, the abermant GPCRX expression or activity, e.g. von Hippel-Lindau syndrome, abermant GPCRX expression activity, e.g. von Hippel-Lindau syndrome, abermant GPCRX expression, and isease, cerebral palsy, epilepsy, lescho-Nyhan syndrome, multiple sclerosis, ataxia-telangiectasia, contractions disease, untuington's disease, infertility, asthman syndrome, multiple sclerosis, ataxia-telangiectasia, contractions, or graft-versus -host disease, infertility, human immunity asthma, arthritis, human contraction, scleroporosis, inflammatory bowel disease, infertility, hypertension, scleroderma, haemophilia, asthma, arthritis, human contraction, susful in gene therapy for treating the above conditions. The protypeptides can be useful in developing powerful associated chromosome mapping, tissue typing, preventive medicine, and chromosome mapping, tissue typing, preventive medicine, and as indiagnostic applicational analysis of various human disorders, as well as invantion and human of protein coupled receptor related protein GPCRN of the invantion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3180 GACACCTAC-GGGGGGTCTACCTCATGGCCTGTGTGGGGGGGGGCCATTACCCAGCTGTG 3238
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                516
                                                                                       The invention relates to a novel polynucleotide encoding a guanosine triphosphare-binding protein coupled receptor (GPCR). A polynucleotide of the invention may have a use in gene therapy. The polynucleotide and polypeptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphare-binding protein coupled receptor. The polynucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the

AAK54951 to AAK64702 encode the human immune/haematopoletic antigen (I)

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)

controlled and polymucleotides may be used in the prevention, diagnosis and
treatment of diseages associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
controlled the activity of mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)

controlled may be used to produce the secreted (I), by inserting the
controlled may be used to produce the secreted (I), by inserting the
controlled into a host cell and culturing the cell to express the
controlled and treat immune/haematopoletic-related diseases, especially
concers and cancer metastesses of haematopoletic-derived cells. AAK64703

concers and cancer metastesses of haematopoletic-derived cells. AAK64703

concers and cancer metastesses of haematopoletic antigen genomic
concers and cancer metastesses of haematopoletic antigen genomic

disorders, obesity, diabetes, Alzheimer's disease. Preferably, compounds that decrease or increase the expression of galanin receptor (GAL4) can be used to treat obesity, diabetes, hyperlipidaemia and stroke. The GPCR nucleic acid is useful for treating the above mentioned disorders by gene therapy techniques. The present sequence is a novel GPCR polynucleotide of the invention
                                                                                                                                                                                                                                                                               219

The invention relates to human novel polymucleotides and associated polypeptides. The polymucleotides and polypeptides are useful for treating inflammatory conditions such as arthitis, nebritis, Crohn's disease, ischiammatory conditions such as arthitis, inepritials, Crohn's disease, ischiammatory conditions such as attenties, immune responses and cancer and for promoting wound healing. The sequences are used to induce the proliferation of neural cells and regeneration of nerve and brain tissue, and are useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as Alzheimer's disease, Parkinson's disease, Huntington's disease and amyotrophic lateral sclerosis. The sequences are involved in chemoteactic or chemokinetic activity, regulation of haematopoiesis, treatment of myeloid or lymphoid cell disorders and platelet disorders such as thrombocytopenia, regeneration of bone, cartilage, treadment injament and/or nerve tissue growth tissue repair, healing of burns, incisions, ulcers, treatment of osteoporosis, osteoarthritiap, bone degenerative disorders and periodontal disease. The sequences of the invention are also useful for gut protection or regeneration and treatment of lung or liver fibrosis, including severe combined immunodeficiency (SCID), bacterial or fungal infections, autoimmune disorders e.g. multiple sclerosis and myasthenia directions, allergic conditions such as asthma, thrombolysis or thrombosis and coagulation disorders. Sequences ABK944800-ABK94981 represent human converses the novel polymucleotides of the invention

Novel G protein-coupled receptor polypeptides including galanin receptor polypeptides useful for identifying modulators that are useful for treating Alzheimer's disease, psoriasis, melanoma, multiple sclerosis, stroke

Claim 2; Page 83; 144pp; English.

The invention relates to an isolated polypeptide encoded by a nucleic acid molecule that is at least 80% identical to the G protein-coupled (GPCR) polynucleotides included in the specification. Also included are probes based on the GPCR sequences (including antisense probes), a host

Mon Feb 43 11:38:46

cell comprising an expression vector comprising the GPCR sequence, antibodies raised against the polypeptides, and methods of identifying modulators of the polypeptides. The polypeptides are useful for identifying modulator compounds which function as modulators, activators, represence, agonists or antagonists of the novel GPCR polypeptides including the GAL4 polypeptide. The antibodies and mucleic acid probes as carefulding the GAL4 polypeptide. The antibodies and mucleic acid probes of an nucleic acids and are used to diagnose a variety of diseases or disorders in which GPCRs are involved e.g., Allzeimer's disease, anyotrophic lateral sclerosis, athma, atherosclerosis, basal cell carcinoma, breast carcinoma, cardiomyopathy, chondrosarcoma, chronic carcinoma, breast carcinoma, cardiomyopathy, chondrosarcoma, chronic constructive pulmonary disease, Crobia diseases, depression, epilepsy, macular degeneration, lymphoma, melanoma, multiple sclerosis, costeoarthritis, osteoporosis, Parkinson's disease, psoriasis, rheumatoid archititis, schizophrenia, ulcerative colitis, tuberculosis and many other diseases listed in the specification. The probes and antibodies are also useful for diagnosing cognition and memory disorders, pain perception classes disorders, cardiovascular activity disorders, pain perception clasorders, obesity, diabetes, Alzheimer's disease. Preferably, compounds that decrease or increase the expression of galanin receptor (GAL4) can be used to treat obesity, diabetes, hyperlipidaemia and stroke. The GPCR nucleic acid is useful for treating the above mentioned disorders by gene therapy techniques. The present sequence is a novel GPCR polymoration.

Tang YT; Drmanac RT, Liu C,

WPI; 2001-639362/73 P-PSDB; ABG14682 New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.

Claim 1; SEQ ID NO 14673; 103pp; English.

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain recombinant production of (II). The polymucleotides are also used and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cativity of (II) are to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in issue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving abstrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations cappend to produce other types of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and amino acid sequences. AAS4197-AAS9564 represent novel human diagnostic coding sequences of the involved. The sequence data for this patent did not appear in the printed specification, but was obtained in partners and the printed specification, but was obtained in the contract of the involved of the contract of the contr electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

for compounds that modulate GPCR activity. By screening a human subject theor the presence of mutations in GPCR DNA, a GPCRErelated disorder or a genetic predisposition can be diagnosed. The sequences can also be used for treatment and prevention of mental disorders such as schizophrenia, attention deficit disorder, anxiety, depression, demental and bipolar disorder, neurological disorders such as Huntington's disease, Parkinson's disease and Tourette's syndrome, metabolic disorders such as thrombosis, moreatia and type 2 diabbetes, cardiovascular disorders such as thrombosis, myocardial infarction, cardiovascular disorders such as viral infections caused by HIV and cancers

The invention relates to novel isolated nucleic acid molecules encoding G protein-coupled receptors termed nGPCR-x. nGPCR-x polymucleotides, c polypeptides, and modulators may be used in the treatment of diseases and conditions such as infections, such as viral infections caused by HIV-1 (human immunodeficiency virus) or HIV-2, pain, cancers, metabolic and cardiovascular diseases and disorders (e.g., type 2 diabetes, obesity, antherosclerosis), Parkinson's disease, and psychotic and neurological atherosclerosis), Parkinson's disease, and psychotic and neurological atherosclerosis), Parkinson's disease, and psychotic and neurological atherosclerosis), Parkinson's disease, and dyskinsesis, such as Huntington's disease or Tourette's Syndorme and many other diseases and syndormes in listed in the specification. nGPCR-x polynucleotides and polypeptides, as used as nGPCR-x modulators, may also be used in diagnostic assays for such diseases or conditions. The present sequence encodes a G protein-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           756
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     497

```
The invention relates to an isolated polypeptide encoded by a nucleic acid molecule that is at least 80% identical to the G protein-coupled (GPCR) polynucleotides included in the specification. Also included are probes based on the GPCR sequence (including antiennse probes), a host cell comprising an expression vector comprising the GPCR sequence.

CC antibodies raised against the polypeptides are useful for identifying modulators of the polypeptides are useful for identifying modulator compounds which function as modulators, activators, impussors, agonists or antagonists of the novel GPCR polypeptides or including the GAL4 polypeptide. The antibodies and mucleic acid probes as including the GAL4 polypeptide. The antibodies and mucleic acid probes or including the GAL4 polypeptide. The antibodies and mucleic acid probes and mucleic acids and are used to disgnose a variety of disease.

CC described above can be used to disgnose a variety of diseases or disorders in which GPCRs are involved e.g., Alzheimer's disease or disorders in which GPCRs are involved e.g., Alzheimer's disease.

CC arcinoma, breast carcinoma, asthma, atherosclerosis, basal cell carcinoma, presence of the polypeptides are also obstructive pulmonary disease, Ccolm's disease, depression, epilepsy, constending the specification. The probes and antibodies are also useful for disapporosis, Parkinson's disease, parorasis, hormonal crelease disorders, andrewish, hormonal crelease disorders, andrewish, hormonal crelease disorders, andrewish, hormonal crelease disorders, andrewish, hormonal crelease disorders, Alzheimer's disease. Preferably, compounds that decrease or increase the expression of galanin receptor (GAL4) can disorders, be used to treat obesity, diabetes, hyperlipidaemia and stroke. The GPCR nucleic acid is useful for treating the above mentioned disorders by gene continued.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              530 CTTTCGGCAAGGGGCTCTGCAGGCTGACGGCGTTTGTGCTCTACACCGACACCTACGGGG 471
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel G protein-coupled receptor polypeptides including galanin receptor polypeptides useful for identifying modulators that are useful for treating Alzheimer's disease, psoriasis, melanoma, multiple sclerosis,
multiple sclerosis, osteoarthritis, osteoporosis, Parkinson's disease, psoriasis, rheumatoid arthritis, schizophrenia; ulcerative colitis; tuberculosis, cognition disorder; memory disorder; ancrexia, hormonal release disorder, cardiovascular activity disorder; pain perception disorder; obesity, diabetes; obesity; diabetes; hyperlipidaemia; stroke; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       290 CTTTCGGCAAGGGGCTCTGCAGGC1GACGGCGTTTGTGCTCTACACCGACACCTACGGG

Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; foetal liver; gene expression; single exon nucleic acid probe; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring in a expression, the probes are therefore useful in grading and/or staging of diseases of the cervix. notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fication, but was ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2.8%; Score 31; DB 4; Length 232; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ABA67527
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The mucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenical; (b) immune considers e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, theumatoid arthritis and ulcerative collisis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases such as wiral, bacterial, fungal and parasatici infections. Note: The sequence data for this patent did not form part of trom WIPO at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Probe #12384 for gene expression analysis in human cervical cell sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Probe; human; microarray; gene expression; cervical epithelial cell;

Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human placenta.
                                                                                                                                                                                                                   The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foctal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                               nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Probe #16429 used to measure gene expression in human placenta sample.
                                                                                                                                                                                                                                                                                                                                                                                                                  ö

The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from maNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        useful
                           The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; microarray; single exon probe; gene expression; breast; disease;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
